DETAILED ACTION

The proposed title, "Method, system and device for measuring the polarisation mode dispersion of an optical fibre" has been changed to: --*Method and apparatus for measuring the polarization mode dispersion of an optical fiber*--.

Allowable Subject Matter

Claims 1, 3-7, 9, 10, 12, and 13 are allowed.

The following is an examiner's statement of reasons for allowance:

As to claim 1, and corresponding dependent claims 3-6 and 13, the prior art of record, taken alone or in combination, fails to disclose or render obvious "determining the polarization mode dispersion of the fiber and associating with the measurement of said information content a probability density function representative of the polarization mode dispersion of the fiber in the form of differential group delay by computing the deconvolution of the one side lobe with the central peak so that the deconvolution corresponds to the probability density of the differential group delay determined by the PMD of the fiber; and outputting the determined polarization mode dispersion," in combination with the rest of the limitations of the claim.

As to claim 7, and corresponding dependent claim 9, the prior art of record, taken alone or in combination, fails to disclose or render obvious "determining the polarization mode dispersion of the fiber and associating with the measurement of said information content a probability density function representative of the polarization mode dispersion of the fiber in the form of differential group delay, and computing the deconvolution of

the one side lobe with the central peak so that the deconvolution corresponds to the probability density of the differential group delay determined by the PMD of the fiber," in combination with the rest of the limitations of the claim.

As to claim 10, and corresponding dependent claim 12, the prior art of record, taken alone or in combination, fails to disclose or render obvious "determining the polarization mode dispersion of the fiber and associating with the measurement of said information content a probability density function representative of the polarization mode dispersion of the fiber in the form of differential group delay, and computing the deconvolution of the one side lobe with the central peak so that the deconvolution corresponds to the probability density of the differential group delay determined by the PMD of the fiber," in combination with the rest of the limitations of the claim.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "**Comments on Statement of Reasons for Allowance.**"
